Specific health checks.

Prostate and Testicular Health

Get advice on the signs and symptoms of testicular and prostate cancer, plus a PSA blood test and examination if clinically relevant. Please note, as this is a screening assessment (suitable for those with no symptoms); if you do have any symptoms, please seek an urgent GP appointment.

Recommended for:
- Men aged 18 and over

Times
- Doctor time – 30 minutes

What’s included?
- Full review of medical history relating to prostate or testicular cancer
- PSA blood test*
- Prostate and testicular examination*
- Onward referral during the appointment or once the PSA results are in, if needed

*Examinations and tests may only be provided if considered clinically appropriate by the doctor, depending on risk factors and medical history. Any results will be communicated securely by phone, letter or email within 14 days.
