Checking your mole

Speak to your GP if you notice any of these changes. They may be harmless, but sometimes they can be a sign of a type of skin cancer called melanoma.

**Asymmetry**
Does one half look different to the other?

**Border**
Are the edges uneven and jagged?

**Colour**
Are there a mixture of different shades in the mole?

**Diameter**
Is the mole more than 6mm across?

**Evolution**
Has the mole changed in shape or colour?
